Madrid, 16th February 2010

To Whom It May Concern,

Renpro Sp. z o. o. was contracted by renergys Krzecin Sp. z o.o. – polish special purpose company of Eolia Renovables to undertake the responsibilities to supervise the investment of constructing the wind farm Krzecin in Poland. The power of the project is 6,0MW and consists of 4 wind power stations with roads and electric power infrastructure.

The company developed the project from the very beginning – from finding the site, securing access to the land by lease agreements, getting the necessary permits, performing environmental analyses to supervising the construction works.

Renpro Sp. z o.o. was also the interface between Eolia Renovables and third parties such as public utility. As resident engineer they provided technical and administrative support, which included monitoring of the execution of civil and electrical works, support at instalation of turbines, commissioning reports, procedures, grid connection, electrical works and distribution of energy contracts. The company displayed also good skills in communicating and cooperating with other project parties including contractors, government authorities and the general public.

The contract was managed in a professional and competent manner and the works were completed on time. We were very happy with the quality of their service and would have no hesitation in recommend Renpro Sp. z o.o. to any other company interested in developing and supervising the construction works on a wind farm project.

Yours sincerely,

Eolia Renovables
